Competitive Programming Exercises

Steven Halim and I published the [Competitive Programming](#) book which is targeted to help regular computer science students to quickly get up and running for the [ACM-ICPC](#) as well as [IOI](#). The book discusses the types of problems that are frequently occurs in programming contests. The exercises have been integrated to this uHunt tool so that you can keep track of your progress. To get started, select a chapter from the table on the right. Each chapter has starred problems (i.e., a must try problem). Happy solving :)
